Improving the Catheter Experience™

**PERFIC CATH™**

The **PERFIC CATH™** makes self-catheterization easier - even with limited dexterity

## Improving the Catheter Experience™

The **PERFIC CATH™** offers extraordinary benefits over existing intermittent catheters. Individuals with spinal cord injury, spina bifida, multiple sclerosis, and other conditions who would like to perform intermittent catheterization (IC) but cannot due to their limited dexterity will find that the **PERFIC CATH™** may now allow them to do so.

Individuals with normal dexterity likely will find that the **PERFIC CATH™** is the easiest and most convenient catheter they have ever used.

We believe the **PERFIC CATH™** is the most significant advancement in intermittent urinary catheters since the closed-system was created.

## Major Benefits

The **PERFIC CATH™** proprietary design allows for **ease-of-use** for individuals with limited or normal dexterity.

The **PERFIC CATH™** closed-system **reduces the risk of infection.**

The **PERFIC CATH™** drainage and disposal is **quick, easy, hygienic** and safe for the environment.

## Candidates

**Spinal cord injury (SCI):** Paraplegics, C6, C7, C8, and even higher cervical level incomplete quadriplegics

**Spina bifida, multiple sclerosis, stroke, diabetes, and prostate problems**

**All individuals with neurogenic bladder:**

- with absent or limited dexterity that prevents self-IC
- who can perform self-IC with difficulty or choose not to because of the challenge and time involved
- who have difficulty with the current products
